RE: CAYLEY HABELGAARN

Dear sir/madam

Cayley had a non-fatal drowning accident and cerebrovascular insult due to this in 2014. She has secondary dystonia and is awaiting DBS therapy to treat this.

She has been receiving regular physiotherapy and will definitely require continued physiotherapy after the surgery as well.

The surgery is not curative but the aim is to improve her function and inhibit the violent dystonic movements that she has.

Please assist the family with funding the surgery

Kind regards

Dr JMN Enslin
